People

Company

- **Manufacturer of environmentally designed everyday products**
- **Award-winning environmental project „Poop Bag Map“**
- **Market leader for biodegradable dog waste bags in German urban demand ***
- **The materials used are biodegradable or made from recycled plastic**
- **Contributing to the reduction of the environmental impact of plastic**

* as of January 2022

Vision

Preserving the natural regenerative capacity of ecosystems

Production using renewable energies

Processing of residual materials such as CO₂, wood cuttings, fecal matter, waste from agriculture or lignin

Everything that is prone to enter the environment should be biodegradable

Consistently high and reliable product quality in the recycling loop process

Our Product Materials

Biodegradable

Material is made with 30 % renewable resources.

Biodegradable even outside of industrial composting.

OK Compost HOME certified
(tested under 20 °C - 30 °C)

PE Recyclate

Material is made of up to 100 % recycled plastic.

Significant CO₂ saving compared to the production of fresh granules.

Lower land use.

OK compost HOME
certified

100% home compostable and biodegradable

Biodegradability:

OK compost HOME certified (tested at 20-30°C) and therefore biodegradable under lower temperature conditions as they prevail in the european environment. This ensures that the degradation is feasible outside of the industrial composting (OK compost / EN 13432).

Plant-based:

TSP biodegradable dog waste bags are made with 30 % renewable resources. The remainder is petroleum-based but its chemical structure is built so it can be segregated by enzymes and then metabolised by microorganisms to water, CO2 and biomass. This results in a lower oil consumption and thus CO2 savings.

Packaging:

The packaging, the roll core and the sticker (which is holding the roll together) are made of cardboard and are thereby biodegradable. The used box is made of FSC certified material.

Good to know:

The home compostable dog waste bags are free of GMOs and plasticizers. They are tear and moisture resistant while the owners enjoy a pleasant sense and a particularly safe feeling due to the matte finish.

Waste Disposal

Benefits

Recycled Material

- 100 % recyclable, made of a mono material (PE), which makes it very easy to recycle
- Significantly less CO₂ emissions during production than fresh PE made from new granulate
- Resource-saving, as no new crude oil has to be extracted for the recycle
- High heating value and clean combustion of PE in the waste incineration plant (residue-free to water and CO₂)
- Safe, tear-proof, waterproof
- Banderole made of FSC-certified material, with tear-off strip for easy opening
- Simple and hygienic waste collection

Drawstring Bin Liners

Made from at least **90%** post-consumer waste (PE) in the EU

For the collection of **recyclables or residual waste**

With drawstrings

Different sizes
20 / 35 / 60 L

Blue Angel certified

Recyclate Garbage Bags

Made from **100 %** recycled material (PE) in the EU. Ideal for the collection of recyclables and residual waste.

Different sizes

60 / 120 / 240 L

Different thicknesses

25 - 100 μm

In Black and Blue

Blue Angel certified

Benefits

Biodegradable Material

- 100 % home-compostable and biodegradable on your own compost
- OK compost HOME certified degradability (at 20 - 30 °C ambient temperature)
- Made with renewable raw materials (corn starch, rejects)
- Banderole made of FSC certified material
- Free from plasticizers, polyethylene and genetically modified substances
- Pleasant feel, excellent perforation
- Safe, tear-proof, moisture-proof
- Simple and hygienic organic waste collection increases convenience and increases the amount of organic waste
